

Everything for the foiling & embossing professional

RP Foil Grade

For the Graphics Industry

A universal foil suitable for a wide range of paper, board and laminates.

Main Characteristics

Uncoated or coated stock, film laminates etc. Bright metallic finish.

Has a proven record of success where other leading market grades have failed.

Fields of Application

Cosmetic cartons and labels, coated and uncoated stocks. UV printable lacquers and water based varnishes. Film laminates OPP, PE and PET.

- Low gsm papers with heavy ink coverage
- Printed stock on the uncoated side of the board
- UV Varnish (foiled at low temp)
- Water based varnish with low dyne levels

Definition

Fine to medium release.
Very good dynes level for inks and other foil.

Stamping Method

Vertical and clamshell platen presses, cylinders and hand/desktop applications.

Working Temperature

100° - 140° C

Available Shades

Gold, silvers and most colours from Jan 2018.

Due to the great variety of substrates, inks, varnishes and working methods of application, Profoil do not assume any liability and we recommend all customers to pre-test the quality of each type of foil.
