

Everything for the foiling & embossing professional

SP Foil Grade

PREMIUM GRADE foil for graphics with a wider application range.

Main Characteristics

For the Graphics Industry

Uncoated or coated stock, film.
Laminates etc. Bright metallic finish.

Has a proven record of success where other leading market grades have failed.

Fields of Application

Cosmetic cartons and labels, coated and uncoated stocks. PU synthetic leathers, diaries, book cloth & covers. UV printable lacquers and water-based varnishes. Film laminates OPP, PVC, PET & ABS laminated.

- Low gsm papers with heavy ink coverage
- Printed stock on the uncoated side of the board
- UV Varnish (foiled at low temp)
- Water based varnish with low dyne levels

Definition

Fine to medium release.
Very good dynes level for inks and other foil.

Stamping Method

Vertical and clamshell platen presses, cylinders and hand / desktop applications.

Working Temperature

Platen 110° - 130° C
Cylinder 120° - 150° C

Available Shades

Gold, silvers and limited metallic colours

Due to the great variety of substrates, inks, varnishes and working methods of application, Profoil do not assume any liability and we recommend all customers to pre-test the quality of each type of foil.
